

About Ops Center Protector

Ops Center Protector is a module of Ops Center that will allow one to create data protection for the enterprise. It can be a simple array snapshot to a complex workflow involving applications, array, and target such as object storage or public cloud.

Launching Protector

From the Ops Center portal, one can click on the Data Protection link to launch the Protector.

The Protector dashboard will be displayed.

The Dashboard displays the current status overview of the Protector.

On the left side of the window, one can see various selections including Nodes, Node Groups, Policies, Data Flows, Schedules, Notifications, Restore, Access Control, and Licenses.

Click on "data Flows"

One should see:

Hitachi Data Instance Director Dashboard Jobs Logs Monitor Storage Reports
